

Maintenance Seminar

Efficient and reliable pumping systems rely on more than good quality installations & maintenance.

Optimal maintenance work contributes significantly to minimizing costs during the life of any pump installation.

- **Reduced operational maintenance cost**
- **Improved efficiency**
- **Increased parts life**
- **Less downtime**
- **Increased safety**

The Maintenance Seminar includes:

- General overview of pump types
- Construction features
- Installation procedures
- Pump dismantling
- Pump component inspection
- Pump assembly
- Routine maintenance
- Potential failures, causes and solutions

The Maintenance Seminar can be tailored to suit individual customer needs.

Based on your requirements we also could include hands on practical sessions.

Sessions are regularly run at various customers throughout Europe on a daily basis.

Preferably we do the training at your premises.

To arrange a Maintenance Seminar at your premises please contact our Sales team or your local distributor.
